LIGHT SOURCE GUIDE

LIGHT SOURCE INFORMATION

UK

LED

Many new LED retrofit light bulbs have a good colour rendering and are dimmable as well. The light sources have very long life and use very little energy compared to halogen and incandescent lamps.

Dimming

In the following list of products Louis Poulsen have included lamp supplies information about dimming. Louis Poulsen recommends contacting lamp supplier for detailed information about the lamps dimming properties.

Energy labelling

The energy labelling indicates the energy consumption classes for the light source used in the fixture. The energy consumption does not indicate how much energy the fixture uses or how efficient the fixture is. It only indicates the efficiency of the light source used in the luminaire. The energy labelling does not take other qualitative parameters into account which are important for the consumer and imperative for Louis Poulsen.

Definition of lumen

The lumen package indicates the amount of light coming from the light source. The higher the value the more light the light source gives off. To help our customers choose a light source Louis Poulsen has generated this alternative light source overview.

The recommended light sources in this overview are selected from the following criteria:

- The light source physically fits inside the fixture (e.g. E27).
- The light source delivers the light experience aimed for the design of the fixture.
- There is no uncomfortable glare from the light source when used in the fixture.
- The light source gives off the minimum required lumen package.
- The light source has good colour rendering properties.
- The light source is as efficient as possible while still complying with above criteria.

LED

Flere lyskilder har god farvegengivelse og kan dæmpes. Lyskilden har en lang levetid og er særdeles energibesparende i forhold til glødepæren. Vi anbefaler 2700 kelvin til det private hjem, som er varm hvid.

Lysdæmpning

Louis Poulsen har i denne liste angivet leverandørens oplysninger om lyskildens dæmpningssmulighed. Louis Poulsen anbefaler at man kontakter leverandøren for detaljeret oplysning om lyskildens dæmpningsevne ved forskellige dæmpersystemer.

Energiklasse

Energiklassificeringen angiver energiklasserne for de lyskilder man kan sætte i lampen. Energiklassificeringen giver ikke information om hvor meget energi lampen bruger eller hvor effektiv lampen er – blot hvor effektiv lyskilden er. Energiklassificeringen tager heller ikke hensyn til en række kvalitative vurderingskriterier, som er vigtig for kunden og som Louis Poulsen lægger stor vægt på.

Definition af lumen

Lumen angiver hvor meget lys der udsendes fra lyskilden. Jo højere lumenværdi jo mere lys. For at hjælpe vores kunder til at tage et godt lyskildevalg har vi lavet denne alternative lyskildeoversigt.

De anbefalede lyskilder på denne oversigt er vurderet ud fra flere kriterier:

- at lyskilden giver den tilsigtede lysoplevelse i lampen
- at lyskilden ikke blænder i lampen
- at lyskilden giver en ”fornuftig” lysmængde i lampen
- at lyskilden fysisk passer til armaturet
- at lyskilden har en god farvegengivelse
- at lyskilden er så effektiv som muligt under hensyntagen til ovenstående

USE OF HALOGEN LIGHT SOURCES

UK

Some light sources – especially halogen – become extremely hot.

In order to ensure a long service life for our fixtures, it is only permitted to use a halogen light source with a wattage which heat emission corresponds to that of the original incandescent bulb.

If you use a halogen bulb, we recommend to choose a wattage that is around 30% lower than the max. wattage stated on the light fixture. For example, if you have a Cirque Ø220 where the max. wattage is stated as 'max. 60W GLS' (where 'GLS' is short for glødetrådspære – incandescent bulb) you must not use a halogen bulb stronger than 42W. As many halogen light sources are more effective, you will in principle, obtain the same amount of light (lumen).

In order to remove as much heat a possible from the halogen bulb, it is likewise important to make sure that the light source chosen is not too small. The length and shape should also be considered, so that when the halogen bulb installed in the lamp, does not come too close to the lamp shade as the heat can damage paintwork, metal and plastic. The chart on the right presents the dimensions for incandescent bulbs. As far as possible, try to comply with these when using a halogen bulb (all the halogen bulbs on the 'recommended' list meet these requirements).

Most standard halogen light sources today fulfil these requirements.

Incandescent	Incandescent		Halogen
Power	Length	Diameter	Max power
40W	97	55	28W
60W	97	55	42W
75W	97	55	52W
100W	97	55	70W
150W	118	55	105W

DK

Nogle lyskilder bliver meget varme, især halogen.

For at sikre levetiden for vores lamper, må der kun anvendes en halogenlyskilde med en wattage hvor varmeudsendelsen modsvarer den oprindelige glødetrådspære.

Vi anbefaler at hvis man bruger en halogen, så bruger man en wattage, der er ca. 30% mindre end den max.wattage der er angivet på amaturet. Har du f.eks. en Cirque Ø220 hvor max. wattagen er angivet til "max. 60W GLS" (GLS betyder glødetrådspære) må der max. sættes en 42W halogen i. Da mange halogenlyskilder er mere effektive, får du som udgangspunkt den samme lysmængde (lumen).

For at fjerne mest mulig varme fra halogen er det ligeledes vigtigt at lyskilden ikke bliver for lille. Lyskilden må heller ikke blive for lang, da varmen kan ødelægge maling, metal og plast.

Nedenstående skema angiver dimensionerne for glødetrådspære. Disse skal så vidt muligt overholdes når du anvender en halogen (alle halogener på anbefalingslisten opfylder disse krav).

De fleste standard halogen lyskilder lever i dag op til disse dimensioner:

Glødepære	Glødepære		Halogen
Effekt	Længde	Diameter	Max effekt
40W	97	55	28W
60W	97	55	42W
75W	97	55	52W
100W	97	55	70W
150W	118	55	105W
