

POLE SPACING REFERENCE INFORMATION FOR NORTH AMERICA

**louis
poulsen**

Last update: July 2021

The main purpose of the lighting is to create safety, security, and accessibility, which together with an attractive visual environment helps to encourage citizens' use of the public space and improve both cultural and business revenue impact for the users. One performance measure of post tops luminaires is maximum pole-to-pole spacing to maintain a minimum foot-candle level at the ground level. These spacing values are provided as a guide to Louis Poulsen post top luminaires.

The spacing analysis includes two different pole heights (12 and 14 feet) and assumes a flat terrain and no other light sources. Only standard variants are included.

Louis Poulsen can provide modified products such as alternative LED color temperatures, amber LEDs, house side shields and brackets for mounting multiple post tops on a single pole. Please contact your local agent for further information on performance measures or product modifications.

The data tables are presented in a manner for quick side-by-side reference and include historical variants that have been discontinued, such as metal halide variants. As LED technology is rapidly evolving, Louis Poulsen regularly updates the post top designs to continue to offer state-of-the-art performance. Please consult our website for the most current performance information.

The tables are grouped by product family. Additionally, a table comparing side-by-side all current post top variants is included.

Flindt Plaza is not included in this reference document, as this product is unique from the others in allowing multiple light sections to be installed on a pole. Louis Poulsen can provide photometric layouts based on any project site plan.

Distance Tables

The following tables are all based on general calculations made with AGI32 and are to be used solely as guidelines for the assessment of pole distances.

Please contact Louis Poulsen for additional options such as different pole heights and foot-candle requirements. Fully detailed photometric layouts can be provided based on a project site plans and lighting schedule.

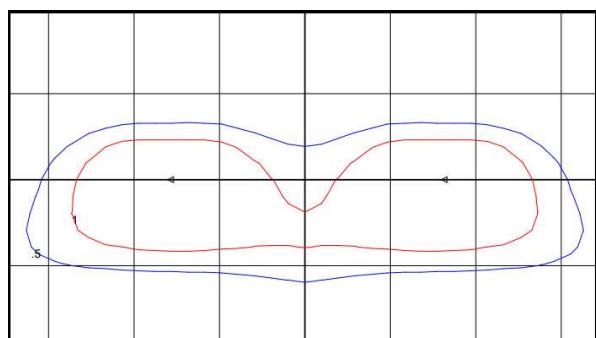

Variant Description	Minimum required foot-candle level			
	0.5 foot-candle, 12 pole	1.0 foot-candle, 12 pole	0.5 foot-candle, 14 pole	1.0 foot-candle, 14 pole
ALBERTSLUND MAXI/71W LED/3000K/120-277V/ UPLIGHT BUG-U3 (2019+)	58.3 FT	46.8 FT	61.6 FT	48.8 FT
ALBERTSLUND MAXI/71W LED/4000K/120-277V/ UPLIGHT BUG-U3 (2019+)	58.7 FT	47.2 FT	62.1 FT	49.1 FT
ALBERTSLUND MAXI/67W LED/3000K/120-277V/ UPLIGHT BUG-U2 (2019+)	57.0 FT	45.8 FT	60.5 FT	48.0 FT
ALBERTSLUND MAXI/67W LED/4000K/120-277V/ UPLIGHT BUG-U2 (2019+)	46.3 FT	61.5 FT	50.4 FT	
ALBERTSLUND MAXI /1/150W/METAL HALIDE/120/277V (DISCONTINUED)	59.5 FT	49.1 FT	64.3 FT	52.9 FT
ALBERTSLUND MAXI /1/250W/METAL HALIDE/120/277V (DISCONTINUED)	68.8 FT	55.5 FT	73.8 FT	58.9 FT
ALBERTSLUND MAXI/82W LED/3000K/120-277V (2014-2018) (DISCONTINUED)	53.7 FT	44.2 FT	56.6 FT	46.0 FT
ALBERTSLUND MAXI/82W LED/4000K/120-277V (2014-2018) (DISCONTINUED)	54.6 FT	43.0 FT	58.4 FT	47.9 FT

Example

Variant description
(Current variants shown at top)

Pole-to-pole spacing
to maintain minimum
foot-candle level between
poles

Method of analysis: pole spacing distances were determined using layout software to achieve continuous zones of minimum specified foot-candle values. Asymmetrical distributions were analyzed using the widest orientation.
